

## PrimeStone Platform

The platform enabling each user to create their own digital currency without programming skills.

The PrimeStone Team has been developing an innovative platform enabling cryptocurrencies creation. Contrary to smart contracts present on the market, the PrimeStone Platform addresses all the people who are interested in cryptocurrencies, even those who do not have the slightest idea of IT and programming. For the first time in history, IT knowledge and programming skills are not required to enter the world of digital currencies not only as a holder but also an owner of your own digital currency. The Platform is being prepared in accordance with the Laws of User Experience (UX). The team prepares an intuitive tool enabling a new cryptocurrency creation in a quick and easy manner. We are focused on developing a practical, user-friendly and transparent wizard, in which crypto enthusiasts will create their products. The wizard will be supplemented with the appropriate comments and hints.

The PrimeStone Platform is an intuitive tool that generates new cryptocurrencies based on PrimeStone Coin source code. All the created digital currencies will be mineable and based on the X11 algorithm. According to the selected package, the user will be able to set various parameters of their own product. At the end, currency / wallet code will be generated (currency code is included in the wallet code), and then the user will be able to download and manage it.

PrimeStone team has delivered new solutions and opportunities by creating an intuitive and easy-to-use tool available to all users. It is a new opportunity for those who have a great business idea, but the further development of their businesses is hindered by the lack of programming skills and necessary IT knowledge. What is significant for various crypto enthusiasts from all over the world, to create source code of a new digital currency on PrimeStone Platform neither IT knowledge nor programming skills are needed. The Platform enables users to work on an intuitive as well as interactive system in a user-friendly form. Another advantage is that the time necessary to make the product is relatively short – The whole process lasts between 10 and 20 minutes. Furthermore, a discussed Platform demands a little of teaching time to be able to fully benefit from the possibilities it provides. To be precise, users must enter only basic data into the system. The rest is automatically generated, and then transmitted to the user. And at this particular moment you become a creator and, at the same time, an owner of a new digital currency.

The user has to register on the website in order to make use of the PrimeStone Platform. After registration 4 packages will be available:

1. Basic
2. Extended
3. Premium
4. Exclusive

In the Basic Package, which is free of charge, the user has the right to modify only selected parameters. Including edition of the following features: name, total supply of coins and block time. In this package, the wallet is generated without any logo.

The Extended Package contains all the features listed in the Basic Package. It also allows logo edition (in the wallet) and block awards modification. In this option, the user is able to choose additional currency features – extra chargeable.

The Premium Package contains all the features listed in the Extended Package, and one of the currency features included in the price. The user has a possibility to add more currency features – in more advantageous price conditions than in Package Extended. Furthermore, in this package the PrimeStone Platform uploads a new currency code on GitHub. In Addition, customers may take advantage of dedicated support while creating their own product.

The Exclusive Package is the most expensive option. It allows to commission a new digital currency. In this case, the product is developed by the PrimeStone Team. Moreover, the user will get an one-hour training on efficient product handling. The price covers the cost of two additional currency features.
